Profile

Dedicated IT Manager with over 25 years of experience in the development and support of large scale software systems. Also experienced with staff development, and technology direction. Passionate about technology and management of IT teams and processes.

Employment History

Software Architect, NetU Consultants, Ltd, Nicosia, Cyprus

June 2008 — Present

- Serving as a liaison between business and technical management to identify, design and implement solutions of complex problems.
- Responsible for establishing the technology direction of the company, evaluating and introducing new technologies and tools for software engineering.
- Technology leader in large scale systems. Responsible for technology selection, technical design and implementation, developer coaching and training.
- Designed and implemented technical processes from business requirements, across all business sectors.
- Designed and executed the implementation of DevOps operations of the company, automating procedures for development, testing, and production releases.
- Led the design, development, adoption of and training for the company internal Java and C# frameworks for standardized software development.
- Led the design and development of the company Code Generator tool that produced standardized Java and C# code for software systems. Led to considerable time savings in application development and company code standards implementation.

Software Architect, CGL Computer Ltd , Nicosia, Cyprus

September 2001 — June 2008

- Responsible for the design, analysis, development, and maintenance of CGL Payroll, a .NET platform payroll application. The software utilized Windows Forms, ASP.NET and Web Services technologies and was used by Cyprus companies for employee payroll and HR records. The primary language used for development was VB.NET and the system could run on MS SQL and Oracle databases.

Information Technology Consultant, Morgan Stanley Dean Witter & Co., New York City

January 1998 — June 2001

- Developed the Equity Research software system of the firm. Participated in the business analysis meetings with the end users of the system and documented the business requirements.
- Developed various brokerage systems as a Programmer/Analyst

Full Stack Developer, The Life Extension Foundation

September 1996 — January 2002

- Designed, developed and implemented company's e-commerce system. It was one of the first shopping cards in operation, using perl / cgi technology.
- Designed, developed and implemented the company's Content Management System, using Java Servlets and Oracle database.

Education

MBA, Open University Of Cyprus, Nicosia, Cyprus

September 2020
